

LGB Relationship Status across Europe

Interactive 2020 FRA Survey Report

This interactive report analyzes **relationship status**, cohabitation forms, and single life trends within the LGB community across European nations in a year **2020**.

The data explores four key **demographic groups** (lesbian women, gay men, bisexual women, and bisexual men) and examines how these partnership patterns shift based on **age, location, and the level of openness** in daily life.

The primary objective is to provide a clear statistical comparison between the **Czech Republic** and the **European Union** average.

Created by Anna Pasterňáková

69.0 % of Czech lesbian women are in a relationship, making them the most coupled group (vs. EU 62.6%).

62.0 % of Czech bisexual women live single, which represents the highest single rate (vs. EU 50.7%).

50.0 % of Czech bisexual men are single, while the EU average jumps significantly higher to 61.9%.

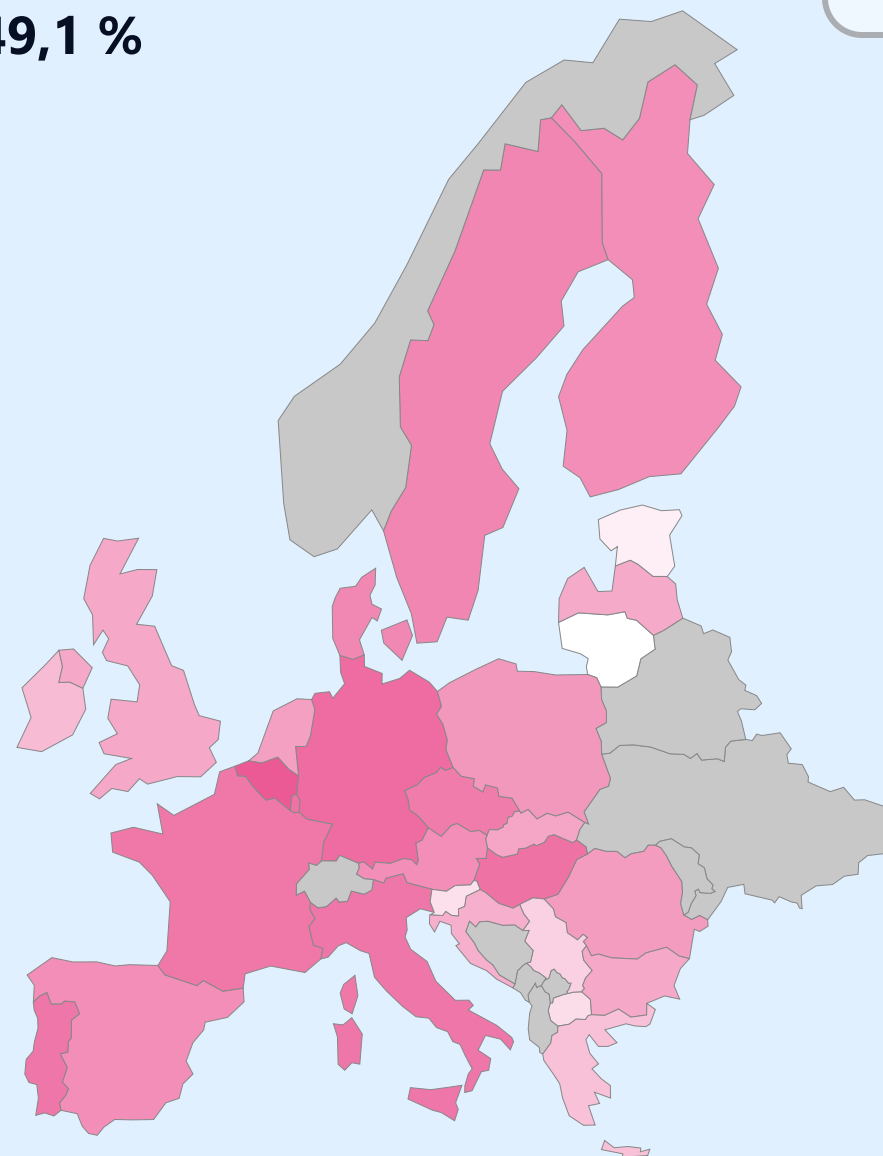

15.0 % of Czech gay men prefer living apart together (LAT), the lowest rate among all groups (vs. EU 17.8%).

18.0 % of Czech bisexual men choose LAT relationships, following a similarly low trend (vs. EU 16.8%).
